CROCODILE TAPE SEAL

Butyl Tape Aluminum Woven Foil

- Fully sealed
- Reflect radiation and heat, UV resistance
- High strength
- Excellent weather resistance
- Waterproof
- Shear resistance
- Can be painted over

- For sealing tiles, concrete, plaster, awning -

CROCODILE TAPE SEAL

Butyl Tape Aluminum Woven Foil

“ Fully sealed, waterproof and UV resistance ”

Application Instruction

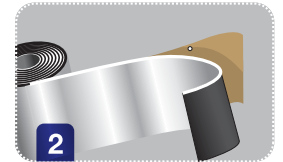

Substrate Preparation

- The substrate must be clean, dust-free and without any traces of oil, laitance, curing compound etc.

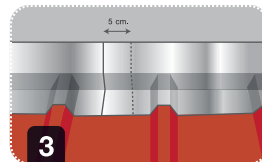

Application

1
Cut the tape at the desired length.

2
Remove release paper and press the tape firmly onto substrate by hand or roller.

3
All joint connection should be a minimum overlap of 5 cm.

Packing

- 10 cm width x 3 m length
- 28 cm width x 3 m length
- 28 cm width x 10 m length

Usage Area

Crocodile Tape Seal is a self-adhesive, butyl rubber base sealing tape which is made of the same material used in the auto industry, with superior quality than the low-quality synthetic rubber such as asphalt or bitumen. Good bonding strength and durability. Upper side laminated with Butyl Tape Aluminum Woven Foil can reflect radiation and heat, can be painted over, UV and weather resistance. It has no solvent, thus does not crack over time. The tape is watertight, can prevent water seepage, can be used in waterlogged areas, and on various materials such as roof, concrete, plaster, awning, polycarbonate, composite aluminum, wood, canvas, fiberglass, cement fiber, asphalt, metal, zinc, metal sheet, U-clamps or C-Line, etc.
